A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/2/2008 has been entered.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-10 and 20-29 rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The claims as currently written, recite comparing at output signal reflective of the relationship between autonomic tone and activity. However, there does not seem to be support for this concept. The specification seems to state that the autonomic tone is group by activity level, and the tone signals are compared to a baseline for that activity level. However, there is no output signal that reflects how tone varies with activity. In addition, in applicant's argument, applicant states that the prior art does not have a parameter that is indicative

of how tone varies with activity. Accordingly, it appears that there is no written description for the current claimed invention and the amendment introduces new matter. Clarification is required.

Claims 1-10 and 20-29 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Specifically, it is unclear how to determine an output signal that is indicative of the relationship between autonomic tone and activity. Clarification is required.

The examiner invites applicant to phone him and discuss the above issue.

Claims 1-10 and 20-29 define over the art of record in that none of the art compares the output signal indicative of the relationship to the baseline, as claimed. However, upon resolution of the issues above, the art rejection will be revisited.
